## OBJECTIVE

Seeking opportunities to develop skills and experiences to advance my career in Software Engineering, Cyber Security, Artificial Intelligence, and other opportunities in Technology..

## EDUCATION

University of Maryland Baltimore County  
B.S. Computer Science

Baltimore, Maryland

## SKILLS

- Programming: Python (5 years), C++ (4 years), C# (2 years), Java (3 years), C (1 year), x86 Assembly (3 years), HTML (1 year), CSS (1 year), Django (1 year), SQL (6 months)
- Software: Linux, Microsoft Windows, Microsoft Office, Google Suite, Visual Studio, MySQL, Jira, Visual Studio Code, Pycharm
- Operating Systems: Microsoft Windows, Linux

## WORK EXPERIENCE

- **Software Analyst/AI Trainer at DataAnnotation (October 2025 - Present)**
  - Critically assess large language model outputs to optimize for accuracy, logical reasoning, factual correctness, and efficiency.
  - Review sets of LLMS and evaluate and justify/why they are/aren't accurate.
  - Analyze and report errors found in AI created HTML, JavaScript, and JSON files.
  - Construct complex prompts and edge-case scenarios to test constraints and improve the model's accuracy.
- **Cyber Security Intern at ARMS Cyber (May-August 2024)**
  - Developed a diagnostic for security service
  - Programmed the diagnostic in C# using Visual Studio.
  - Impacted the company by boosting employee productivity via the diagnostic.
  - Implemented and operated a NATS.IO Server over 3 computers.
  - Pushed/Pulled input to the NATS.IO Server using Python Scripts.
  - Showcased completed internship contributions to senior company leadership.
  - Worked independently and with others to increase the quality of the company's security service.
- **Computer Science Intern at ARMS Cyber (July-September 2020)**
  - Developed a python application to correlate library dependencies of Linux programs.
  - Leveraged output in order to develop a proof of concept to demonstrate defending thousands of program instances around the world from exploits.
  - Programmed in Python independently in a professional work setting.

## PROJECTS

- Epic Forums - A forum website where people can create accounts, make posts and videos about video games ,and converse with others with similar interests. It was developed in HTML for Front-end and Django/Python for Backend and Database. Located at <https://monkeywizard38.pythonanywhere.com/>

## RELEVANT COURSEWORK

- CMSC 449 Malware Analysis (Spring 2025)
  - Used tools to find/debug malware using a Windows 7 Virtual Machine using tools such as Ghidra. Learned the different types of malware and completed assignments where we analyzed how different kinds of malware spread/operate such as Trojan Horses, Worms, Viruses, Ransomware, and more.
- CMSC 461 Database Management Systems (Spring 2025)
  - Designed comprehensive documentation, including Entity Relationship Diagrams (ERDs), data models, and schema definitions, to support the development of complex relational databases and custom MySQL queries.
  - Worked on a partner project where we created Python scripts
- CMSC 447 Software Engineering 1 (Fall 2024)
  - Worked in a group to create a Web Project using HTML, CSS, and Javascript. Our project was a website where students were able to upload their notes from one class they previously took with the intention of future students using the website to study from. We had a database for every class and subject offered at UMBC.
